FMD Vaccine Matching Strain Differentiation Report

Lab Reference WRL Batch Number: WRLFMD/2009/00033
Sender Details: [redacted]

Date Received: 15th June 2009
Country of Origin: Nepal
Date Reported: 4th January 2010

Report no:	VNT				LPBE						
Vaccine: / Field Isolate:	VNT	O Manisa	O Bfs	O Ind R2/75	ELISA	O 4174	O BFS 1860	O Ind 53/79	O Hkn 6/83	O Tai 189/87	O Manisa
O Nep 2/2007	Mean	0.28	0.60	>1.0	Mean	0.54	0.42	>1	1.00	0.50	>1
O Nep 7/2008	Mean	0.29	0.47	>1.0	Mean	0.50	0.29	DNT	1.00	0.50	>1
O Nep 6/2009	Mean	0.15	0.60	>1.0	Mean	0.44	0.32	DNT	DNT	DNT	>1
O Nep 15/2009	Mean	0.17	0.40	>0.94	Mean	0.75	≥1	0.84	0.75	0.63	>1

Results Approv [redacted] **Official Stamp:** [redacted]

Date: 8/1/2010

Interpretation of Results

In the case of Virus Neutralisation Test (VNT):

$r_1 = \geq 0.3$. Suggests that there is a close relationship between field isolate and vaccine strain. A potent vaccine containing the vaccine strain is likely to confer protection.
$r_1 = < 0.3$. Suggests that the field isolate is so different from the vaccine strain that the vaccine is unlikely to protect.
ND = Not done.

In the case of Liquid Phase Blocking Elisa (LPBE):

$r_1 = 0.4\text{-}1.0$. Suggests that there is a close relationship between field isolate and vaccine strain. A potent vaccine containing the vaccine strain is likely to confer protection.
$r_1 = 0.2\text{-}0.39$, Suggests that the field isolate is antigenically related to the vaccine strain. The vaccine strain might be suitable for use if no closer match can be found provided that a potent vaccine is used and animals are preferably immunised more than once.
$r_1 = <0.2$. Suggests that the field isolate is so different from the vaccine strain that the vaccine is unlikely to protect.
DNT = Did not trap.
ND = Not done.
