FMD Vaccine Matching Strain Differentiation Report

Lab Reference WRL Batch Number: WRLFMD/2010/00029

Sender Details:

Date Received: 31st August 2010
Country of Origin: Pakistan
Date Reported: 4th January 2011

Report no:	VNT							LPBE			
Vaccine:		O	O	O	O	O	O		O	O	O
Field Isolate:	VNT	4625	Bfs	R2/75	Manisa	Taw98	TNN 24/84	LPBE	BFS 1860	4625	Manisa
O Pak 25/2010	Mean	0.78	0.50	>1.0	0.42	0.73	>1.0	Mean	0.31	DNT	0.10
O Pak 42/2010	Mean	0.83	0.48	>1.0	0.36	0.76	>1.0	Mean	0.27	DNT	0.00

Results Approved By:

Interpretation of Results

In the case of Virus Neutralisation Test (VNT):

$r_1 = \geq 0.3$. Suggests that there is a close relationship between field isolate and vaccine strain. A potent vaccine containing the vaccine strain is likely to confer protection.

$r_1 = < 0.3$. Suggests that the field isolate is so different from the vaccine strain that the vaccine is unlikely to protect.

ND = Not done.

In the case of Liquid Phase Blocking Elisa (LPBE):

$r_1 = 0.4-1.0$. Suggests that there is a close relationship between field isolate and vaccine strain. A potent vaccine containing the vaccine strain is likely to confer protection.

$r_1 = 0.2-0.39$, Suggests that the field isolate is antigenically related to the vaccine strain. The vaccine strain might be suitable for use if no closer match can be found provided that a potent vaccine is used and animals are preferably immunised more than once.

$r_1 = < 0.2$. Suggests that the field isolate is so different from the vaccine strain that the vaccine is unlikely to protect.

DNT = Did not trap.

ND = Not done.
