FMD Vaccine Matching Strain Differentiation Report

Lab Reference WRL Batch Number: WRLFMD/2010/00031

Sender Details:

Date Received: 2nd September 2010

Country of Origin: Turkey

Date Reported: 14th January 2011

Report no:	VNT							LPBE		
Vaccine:	VNT	A Eritrea	A Ind 17/82	A Iran 2005	A22 Irq	A Sau 41/91	A Tur06	LPBE	A22 Irq 24/64	A Irn 99
A Tur 20/10	Mean	0.25	0.37	0.38	0.24	0.06	0.39	Mean	0.08	0.12
A Tur 34/10	Mean	0.16	0.12	0.51	0.24	0.10	0.46	Mean	0.19	DNT

Results Approved By:

Interpretation of Results

In the case of Virus Neutralisation Test (VNT):

$r_1 = \geq 0.3$. Suggests that there is a close relationship between field isolate and vaccine strain. A potent vaccine containing the vaccine strain is likely to confer protection.

$r_1 = < 0.3$. Suggests that the field isolate is so different from the vaccine strain that the vaccine is unlikely to protect.

ND = Not done.

In the case of Liquid Phase Blocking Elisa (LPBE):

$r_1 = 0.4-1.0$. Suggests that there is a close relationship between field isolate and vaccine strain. A potent vaccine containing the vaccine strain is likely to confer protection.

$r_1 = 0.2-0.39$, Suggests that the field isolate is antigenically related to the vaccine strain. The vaccine strain might be suitable for use if no closer match can be found provided that a potent vaccine is used and animals are preferably immunised more than once.

$r_1 = < 0.2$. Suggests that the field isolate is so different from the vaccine strain that the vaccine is unlikely to protect.

DNT = Did not trap.

ND = Not done.
